HEALTH AND SAFETY MANAGEMENT SOFTWARE

SafetyPro is the innovative software package that provides an all-in-one health and safety management system, giving you everything you need to meet the requirements of health and safety legislation and maintain a safe working environment. Developed by Plansafe Solutions, the leading experts in health and safety solutions, SafetyPro provides an industry-by-industry package that will take you all the way from non-compliance to full compliance with legislation. With the standard version for small businesses and the enterprise version for larger organisations, SafetyPro will give you all the documentation, information and support you need to keep in line with health and safety law, in a cost effective way.

SafetyPro: the all-in-one software system

Plansafe launched its all-in-one health and safety software package, SafetyPro, at the end of 2004. Since then, companies and organisations throughout the UK have adopted the easy-to-use management system, secure in the knowledge that it gives them everything they need to comply with health and safety law and to keep their working environment safe.

SafetyPro guides the user through the production of documents and produces reports in an 'HSE-friendly' format, ready for on-line submission to the Health and Safety Executive, saving your company both time and money. The software is designed by Plansafe's technical team, including former HM Inspectors of Health and Safety, who are experienced in a wide range of different industries. Their technical expertise ensures that the content is accurate and meets all HSE requirements.

The SafetyPro package will be tailored to your own organisation's requirements, and some sectors have their own versions. SafetyPro Engineering is designed for a general engineering environment, with material that includes a Permit-to-Work system and detailed guidance on its completion and use. SafetyPro Construction ensures that building projects go safely and smoothly, while SafetyPro Vet features everything a veterinary practice needs to comply with health and safety legislation and for procedures to be safe at the surgery or on the farm. SafetyPro Golf provides effective health and safety management for staff and members on the golf course.

Adding value

SafetyPro is a market leader, providing complete documentation and offering a management system that provides much more than purely template-based programs. A number of features add value to the system, including Event Manager, which allows you to log and receive reminders of events such as equipment inspections and follow-up actions, training updates and refreshers and any other aspect of your business that requires regular and routine attention. The software can save you time on administration, by scheduling meetings and other events automatically.

The SafetyPro subscription gives free access to the Members' Section on the website, where you can join in the clients' forum, ask our experts questions and receive free health and safety advice. You can also subscribe to the free email newsletter on health and safety issues in your sector. Whenever there are changes in health and safety legislation, we keep you up to date. Subscribers can also qualify for discounts on other Plansafe services, including training for health and safety.

The SafetyPro program is among the range of support offered by Plansafe Solutions. Matthew McVeigh, Plansafe's experienced Director of Health and Safety Services, can advise about the most suitable options for your company's health and safety management. SafetyPro is available in standard or enterprise version. The standard package costs £500 (plus VAT), and this includes the first year's subscription to the Members' Section of the SafetyPro website. For a small annual subscription, you can remain a member and continue to benefit from the service.

Thanks to the **SafetyPro** package, we can be confident that we're complying fully with health and safety legislation and keeping the workplace safe.

Alan Handley, Health and Safety Officer
