

PLANSAFE ENGINEERING SERVICES

TAKING SAFETY TO HIGHER LEVELS

NOVEMBER 2014

Plansafe Solutions Ltd was established in 1995 and is, at its core, a health and safety consultancy. The Engineering Services Division is primarily engaged with the statutory examination of, reporting on, and proof load testing of lifting equipment as required by the Lifting Operations and Lifting Equipment Regulations (LOLER '98).

Plansafe are able to examine an extensive range of lifting equipment and accessories, from large scale overhead cranes to individual slings and shackles. Our qualified engineers are experienced in the use of such lifting equipment and are knowledgeable about their applications. Telehandlers, forklift trucks, chain blocks and other basic items of lifting equipment are regularly examined by Plansafe engineers, together with other items of plant such as excavators which are examined in accordance with the Provision and Use of Work Equipment Regulations (PUWER '98).

Not only do we cover lifting equipment, but also Minor Pressure Systems (PSSR) such as workshop compressors and LEV ventilation equipment, for example those found in sawmills and joiner's workshops, as required by the COSHH regulations, can also be examined by Plansafe.

"HAVING CALLED PLANSAFE TO DO A JOB FOR US AT SHORT NOTICE, WE HAVE FOUND THEM TO BE EFFICIENT AND PROFESSIONAL. WE WILL BE USING THEM IN FUTURE TO CARRY OUT ALL THE INSPECTIONS OF OUR PLANT AND EQUIPMENT"

- Michael Foster,

J.E. Foster & Son Ltd.

CAPABILITY

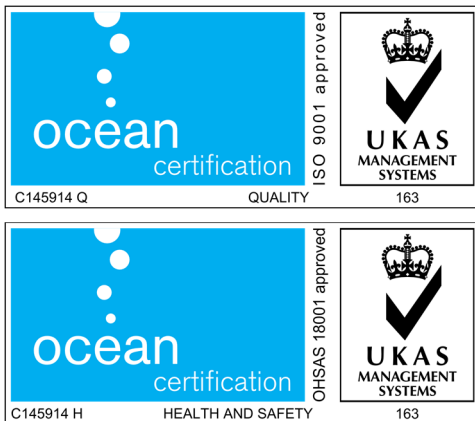

- Statutory Examinations
- Proof Load Testing
- Local Exhaust Ventilation (LEV) Inspection
- Minor Pressure Systems
- Consultancy Services

HOW SAFE ARE YOU ?

Credentials

- Members of the Independent National Inspection and Testing Association (INITA)
- Investors in People Bronze Award
- OHSAS 18001
- ISO 9001
- Bureau of Engineer Surveyors
- Society of Operations Engineers
- Institute of Engineering and Technology

Our Engineers

Robert W Burton, BEng (Hons), MIET, AMBES

A qualified electrical engineer, prior to joining Plansafe Robert's career involved extensive management and practical experience with the use of cranes, heavy haulage, forklift trucks and specialised lifting equipment. He is trained as an appointed person for the design and planning of lifting operations and also as a crane lift supervisor.

Sam Shipley, MBES, MSOE

Sam is also a qualified electrical engineer and worked predominantly in the aerospace industry for a range of companies including BAE Systems and Boeing. He then made use of his mechanical engineering skills to work for a national inspection company as an engineer surveyor before joining Plansafe in 2013.
